

1 Data trainning

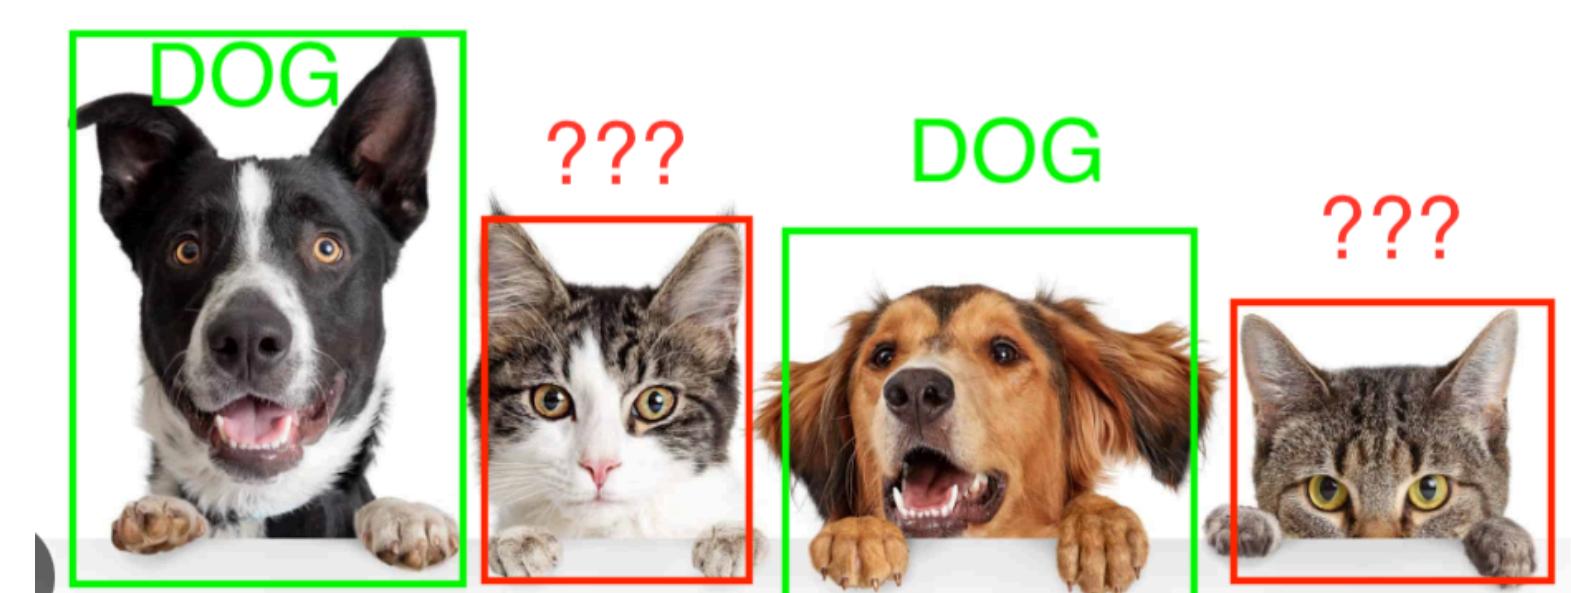

means computers study objects from images.
Take dogs as example.

How computers works?

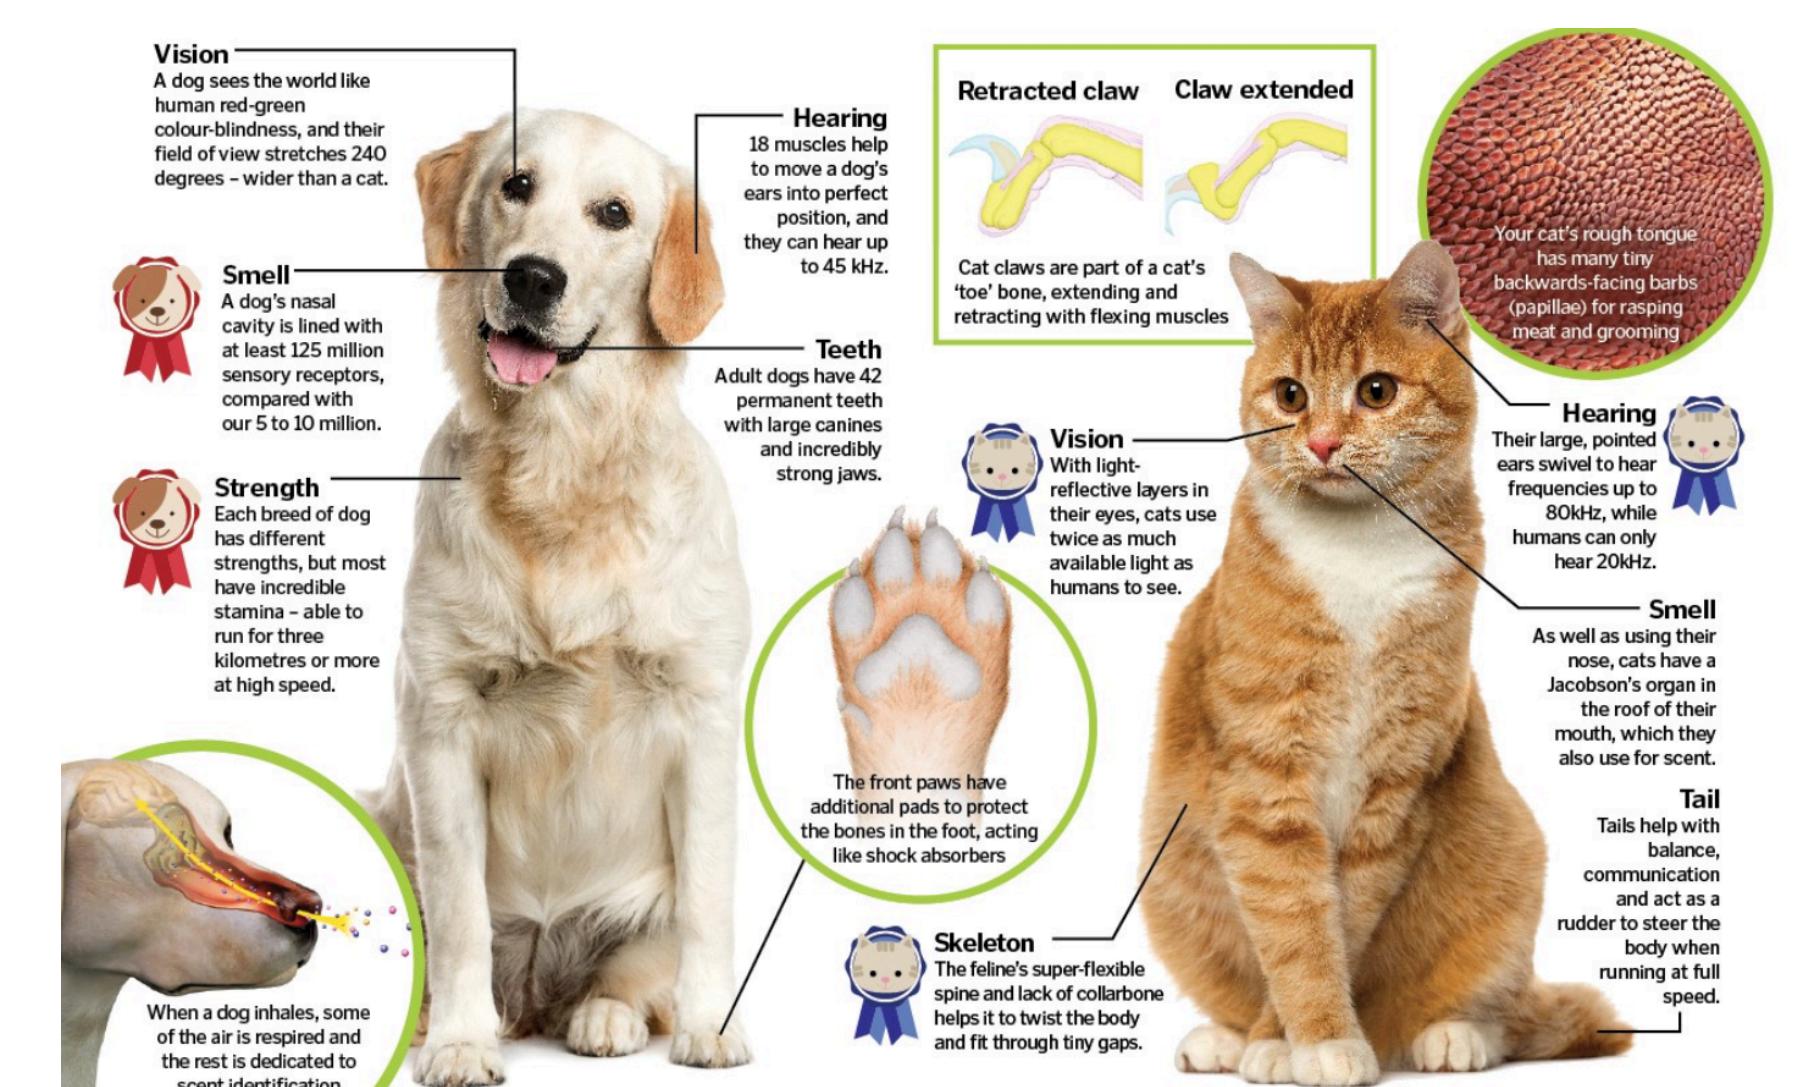

2 Guess

means computers identify objects from images.
it is clear that dogs has been marked;
unfortunately, cats are not marked correctly.

3 Update

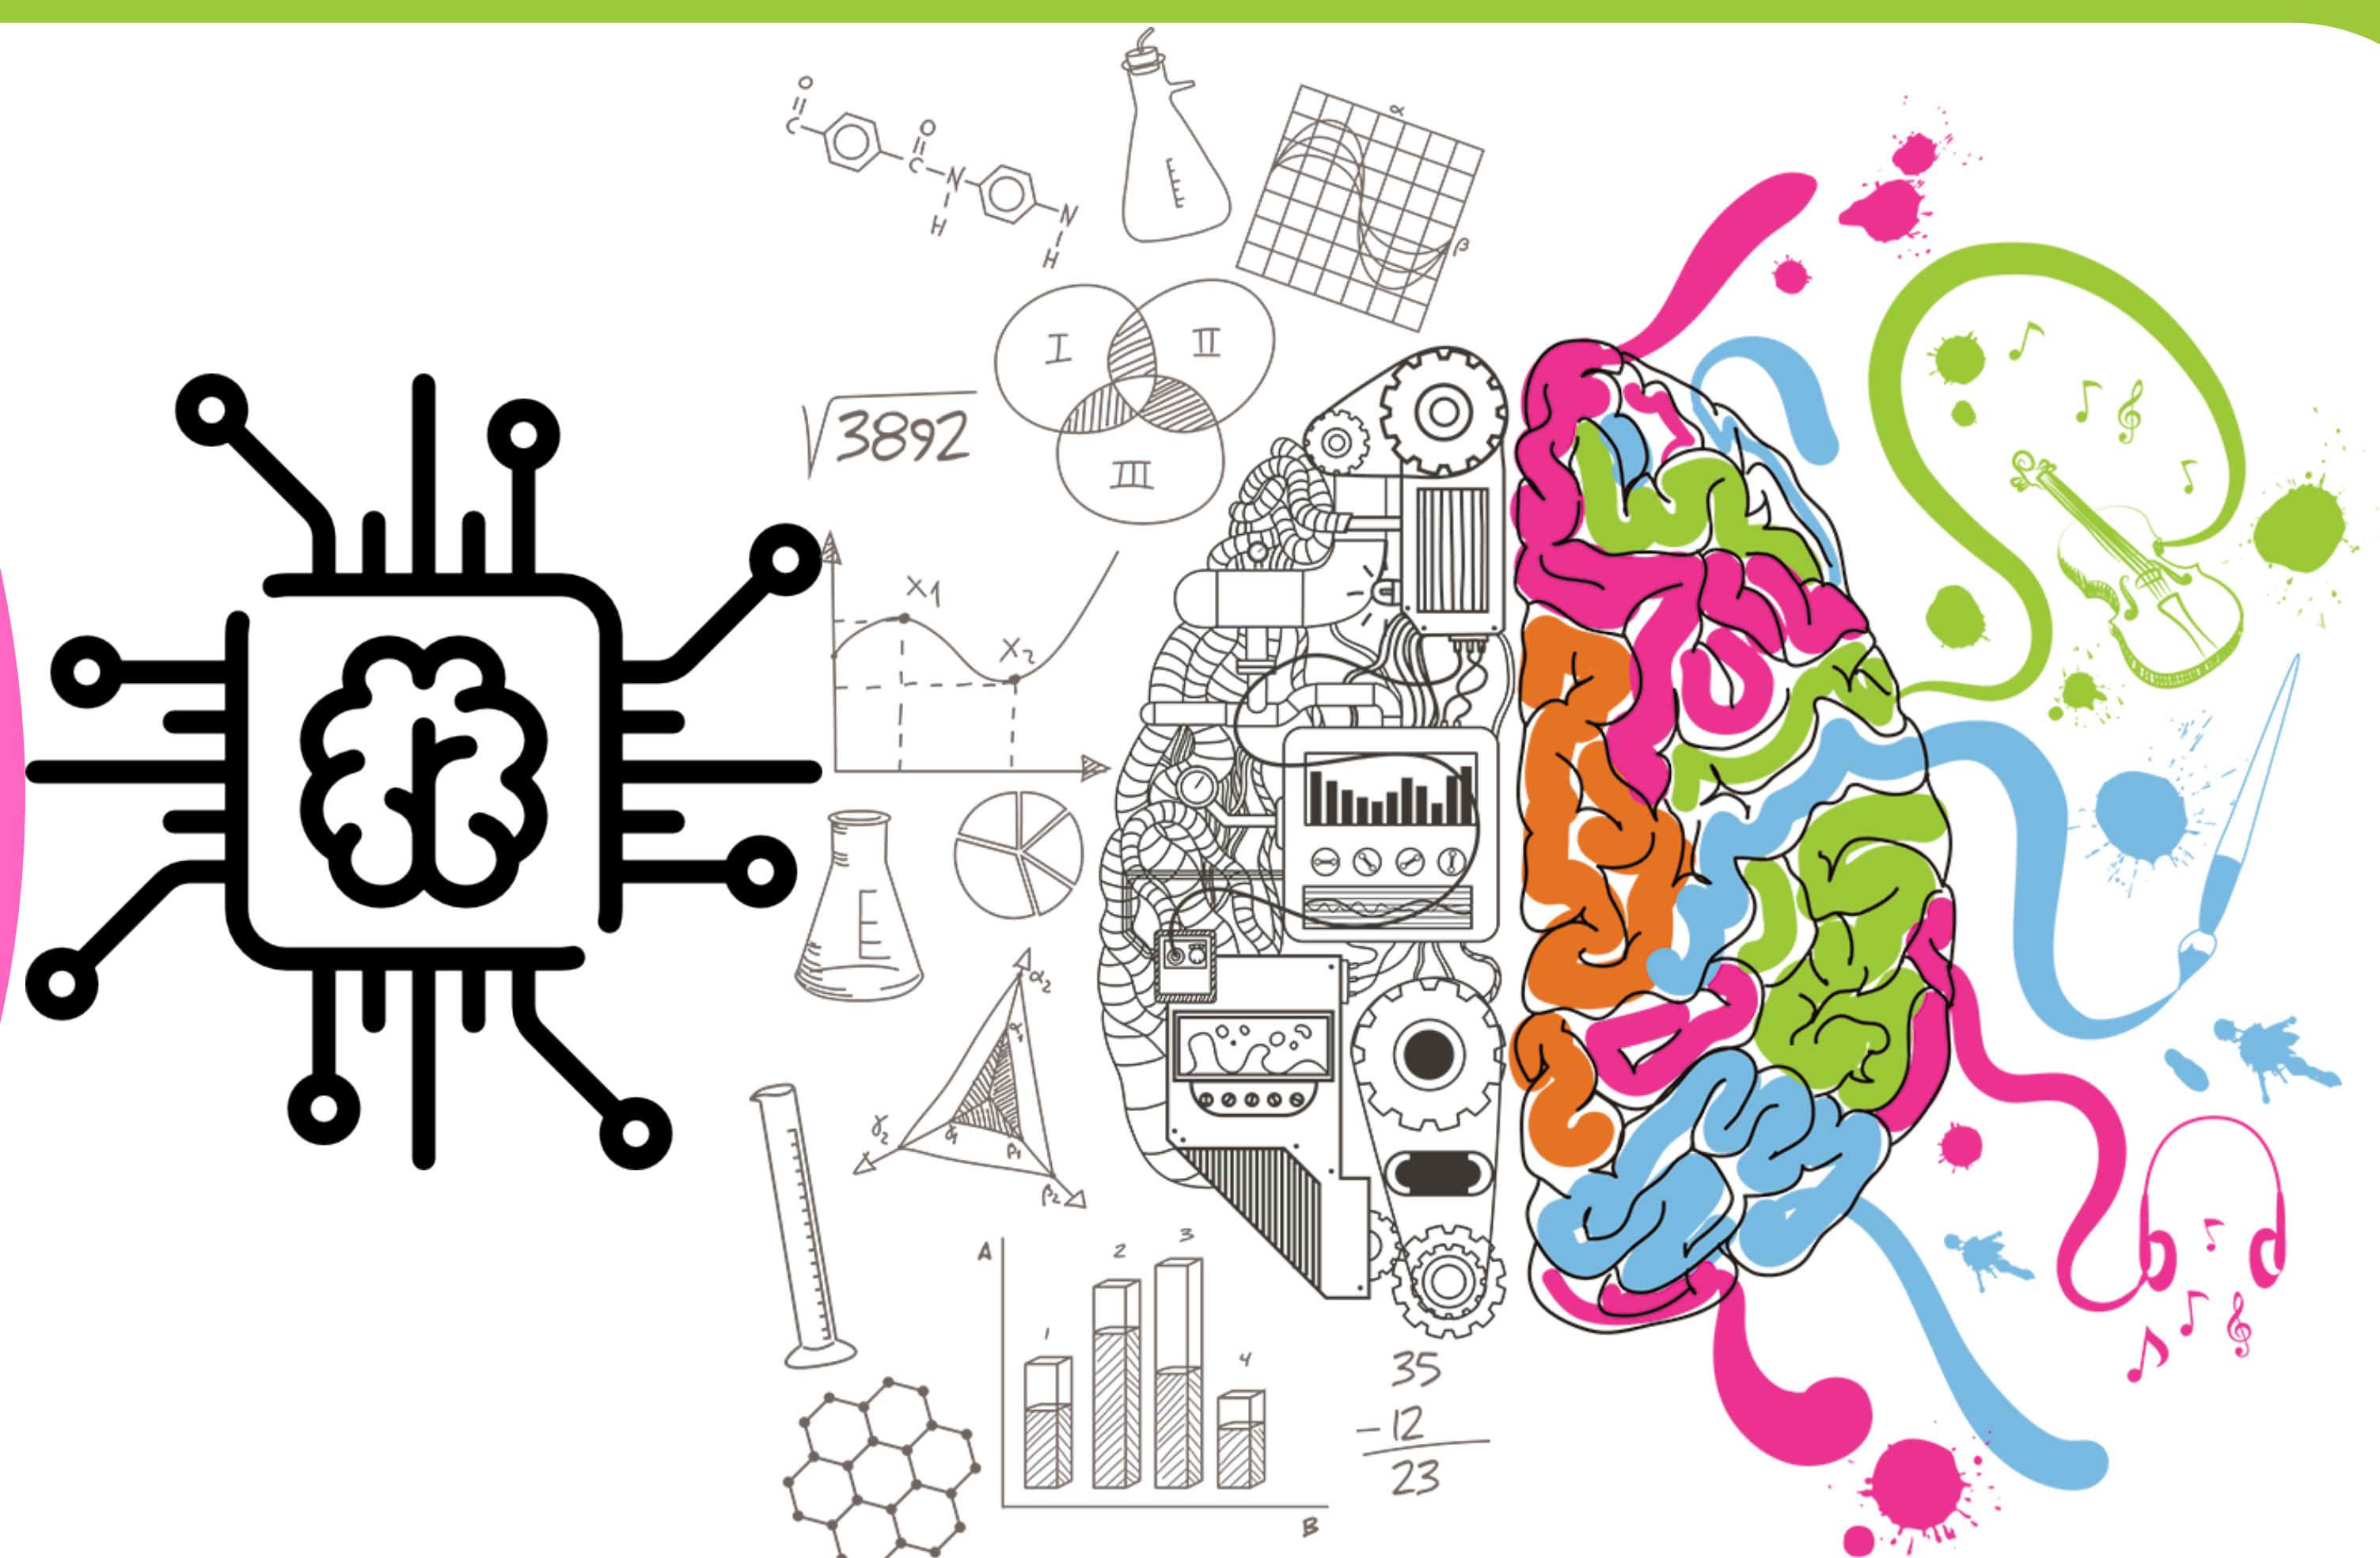

means computers
study new objects
from images by data
training again.

Machine

make computers intelligent
like human brain

Learning

What can machine learning do for kids under 12?

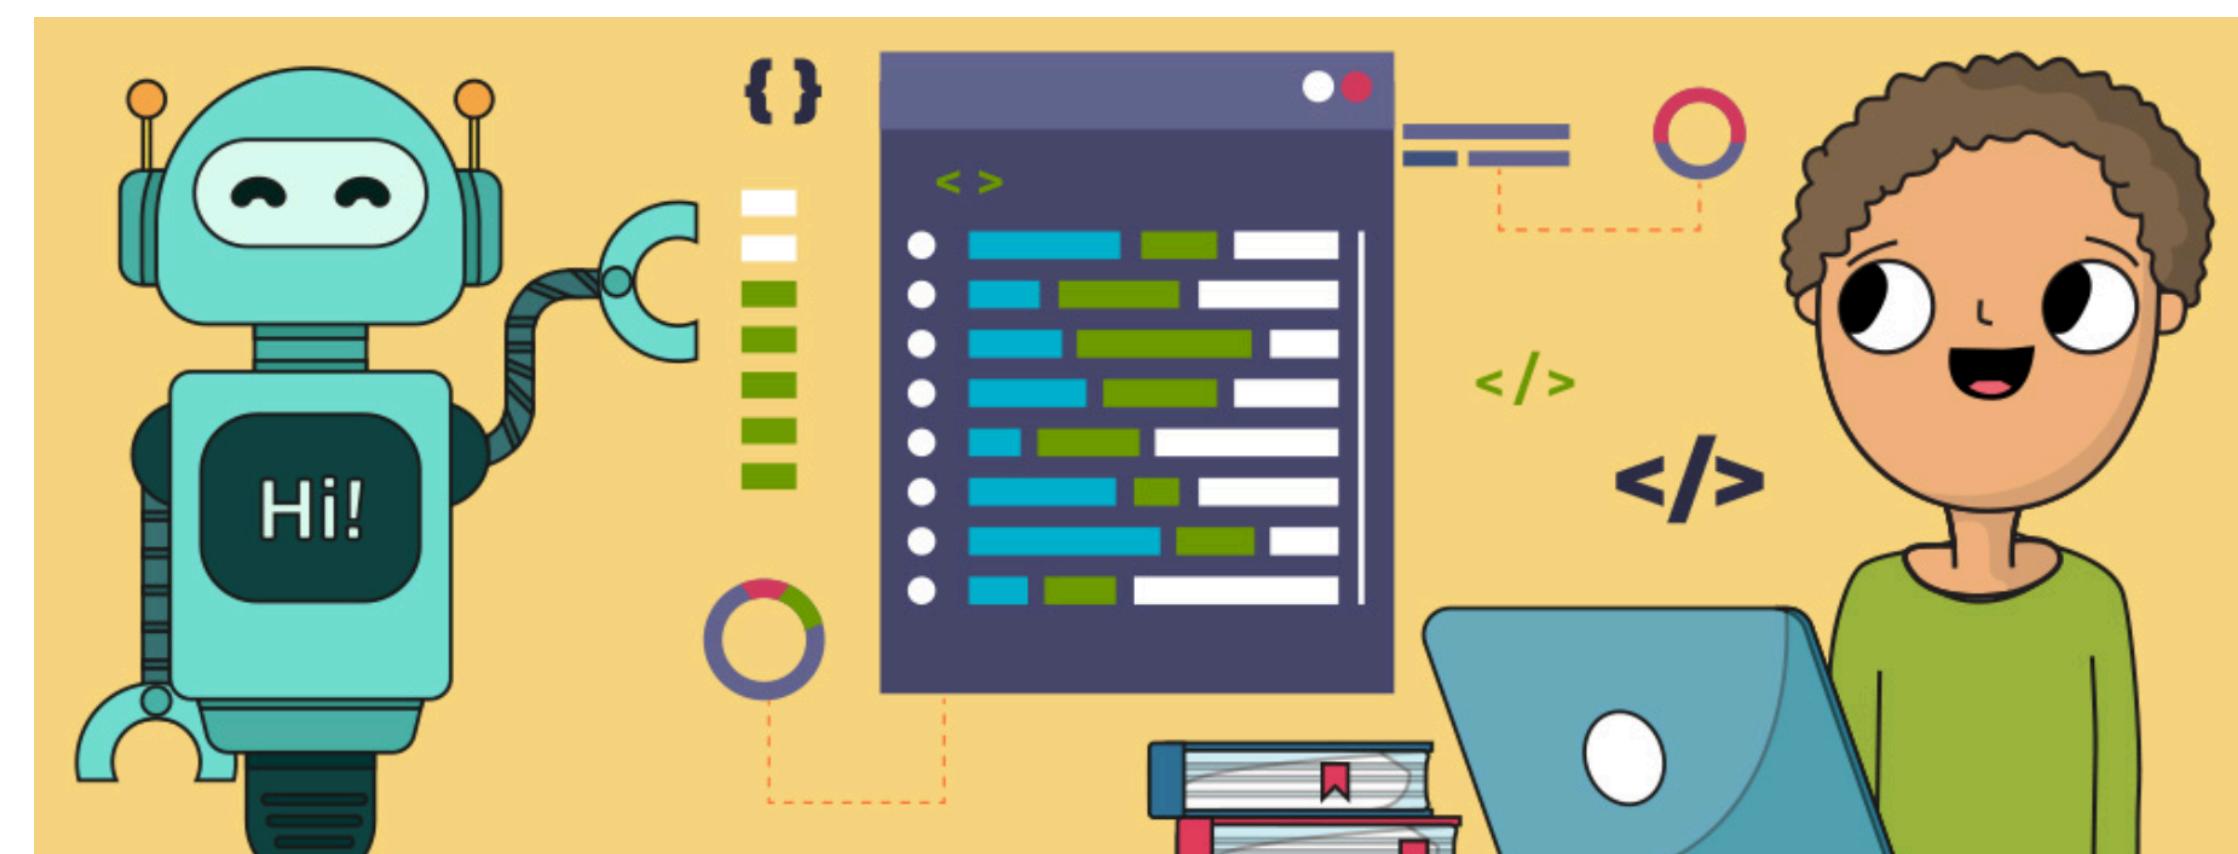

1 Personalized education

AI tutors may help kids study more efficiently based on their strengthness and weakness.

2 Funny interaction

AI may teach kids through enjoyable visual and audio content like telling story.

Who are we?
